

STATE OF MICHIGAN

JENNIFER M. GRANHOLM
GOVERNOR

DEPARTMENT OF NATURAL RESOURCES
LANSING

K. L. COOL
DIRECTOR

Dear Interested Citizen:

The Departments of Natural Resources and Agriculture welcome your interest in improving fishing opportunities in public waters of Michigan. Both departments are directly involved in managing and regulating the stocking of fish by private parties into waters of the state. Department of Natural Resources (DNR) is the agency responsible for protection and management of fisheries resources throughout the state. Department of Agriculture (MDA) is the agency responsible for oversight of the private aquaculture industry in Michigan, a source from which you can obtain fish for stocking. We have worked together to develop a stocking permit process that provides you with opportunities to stock fish as a private party, yet maintains protection of the state's fisheries resources.

As a private party, you may wish to stock fish into public waters of the state. To do so requires a permit from DNR. This permit is required to ensure that fish to be stocked are:

- 1) healthy and will not pose a disease risk to populations in the wild;
- 2) a species that currently exists in the watershed and do not pose long term management problems; and
- 3) a species that is compatible with the overall fishery management goals in a watershed.

The permit process ensures protection of the state's fisheries resources by preventing potential long range and expensive problems before they occur, thus improving fishing opportunities for all.

The permit process is detailed in the attached materials. It requires a purchaser or their agent to first determine if the water body to be stocked is public or private. Water bodies that have permanent inlets or outlets will require a permit, as fish will escape from these waters into public waters. Waters with no permanent inlets or outlets do not require a permit. Waters that have been stocked in the past by the state require a permit along with those that have public access. If you are unsure about the status of the water body you wish to stock, please contact any of our Fisheries Management Unit offices for assistance (see Table 1).

If the water body to be stocked is public, you will need to fill out an application (attached) and specify what species and how many fish you intend to stock. This allows

DNR to determine if the species is permitted for stocking, and if it is compatible with management goals established for the watershed. It is also important for you to determine if the source from which you intend to obtain the fish is free of certain fish diseases (see Table 2), so be sure to enquire about the fish disease certification status of the source you intend to use. DNR recommends that any applicant obtain a copy of the disease certification from the source, as fish must be certified disease-free for stocking in waters of the state. Although providing a copy of the disease certification with your application will speed the processing of the permit, it is not a necessary step.

After you fill out the application form, submit it to the Fisheries Management Unit (see Table 1) responsible for the watershed in which you wish to stock fish. If you need help determining the right office, feel free to contact any Fisheries Management Unit Office. It is a good idea to send copies of your application form to multiple individuals in the Fisheries Management Unit to ensure that it gets processed promptly. The same is also true for follow up emails and other inquiries as our staff is frequently in the field and may not see your message. By sending emails to multiple staff, you will get a response back much quicker. Our fisheries staff will review the permit and provide you with either an approved permit or a letter detailing why the permit was denied.

Once you have an approved permit, you can stock your fish. Please be sure to contact our Fisheries Management Unit Office about the stocking at least two calendar days before it occurs. Also be sure that either an original or a copy of the Public Waters Fish Stocking Permit is on site during the stocking. After stocking, be sure to submit the Public Waters Fish Stocking Report to DNR. This data will be input into our databases and will become a permanent part of the fisheries management record for the watershed.

Both DNR and MDA are appreciative of your interest in the state's fisheries resource. We hope this process will meet your needs.

Good Fishing to All,

Kelley D. Smith, Ph.D.

PUBLIC WATERS STOCKING PERMIT PROCESS

January 1, 2003 through December 31, 2003

- 1) It is the responsibility of the purchaser or their agent to determine if a permit is required to stock fish into a water body. If a Public Waters Stocking Permit is necessary, the purchaser or their agent must obtain the permit prior to any stocking event. A copy of the Public Waters Stocking Permit Application is in Attachment 1.
 - a) If the water body to be stocked is permanently connected to public water bodies via an inlet or outlet, the purchaser or their agent must obtain a Public Waters Stocking Permit.
 - b) If the water body to be stocked is not permanently connected to any other water body, it does not require a Public Waters Stocking Permit unless it meets one of the two following conditions.
 - i. If the water body has public access, the purchaser or their agent must obtain a Public Waters Stocking Permit.
 - ii. If the water body has been stocked at anytime in the past by the state, the purchaser or their agent must obtain a Public Waters Stocking Permit.
 - c) If unsure of the need for a permit to stock a water body, the purchaser or their agent may request assistance from any Department of Natural Resources (DNR) Fisheries Management Unit Office. The offices and fisheries biologists are listed in Table 1.
- 2) The purchaser or their agent can obtain an application for a Public Waters Stocking Permit from any DNR Fisheries Management Unit Office, from the DNR Internet site (www.michigan.gov/dnr) or from any private aquaculture facility.
- 3) The purchaser or their agent must return the completed Public Waters Stocking Permit Application to the DNR Fisheries Management Unit Office responsible for the watershed that is to be stocked. See attached Table 1 to determine which office is the appropriate location.
- 4) DNR Fisheries Management Unit staff will employ the following guidelines in its review of the permit application:
 - a) Disease status of the private aquaculture facility. Lists of emergency fish, reportable and diseases of concern are in attached Table 2.
 - i) Emergency Fish Diseases - If the facility has a valid disease free certification for emergency fish diseases, the fish can be stocked in public waters. If the facility does not have a current or valid disease-free certification for emergency fish diseases, the permit shall be denied.
 - ii) Reportable Disease - If the facility has a known reportable disease, additional review shall be conducted before approving any stocking. The existence of

reportable diseases at a facility will not automatically cause the denial of the permit but will require additional consultation with fish health experts from DNR and MDA prior to the issuance of the permit to determine if there are potential resource impacts from stocking the fish. If there is no potential for resource impacts then the fish can be stocked in public waters. If there is the potential for resource impacts then the permit will be denied.

- iii) Diseases of concern - If the facility has a known disease of concern, additional review shall be conducted before approving any stocking. The existence of diseases of concern at a facility will not automatically cause the denial of the permit but will require additional consultation with fish health experts from DNR and MDA prior to the issuance of the permit to determine if there are potential resource impacts from stocking the fish. If there is little or no potential for resource impacts then the fish can be stocked in public waters. If there is the potential for resource impacts then the permit will be denied.
 - b) Species analysis – If the species has been approved for stocking in waters of the state, the fish can be stocked in public waters. If the species has not been approved for stocking in waters of the state, the permit shall be denied. The list of approved species for fish stocked can be found in Table 3.
 - c) Management implications of the stocking – If the stocking action is consistent with DNR’s management objectives for the water body and watershed to be stocked, the fish can be stocked in public waters. If the stocking action is not consistent with DNR’s management objectives for the water body and watershed to be stocked, the permit shall be denied.
- 5) After review of the application, the Fisheries Management Unit will determine if the permit is to be approved or denied based on Sections 4 a, b and c above, taken in their entirety.
 - 6) Within seven (7) calendar days of receipt of the permit application, the Fisheries Management Unit shall provide either an approved permit to the purchaser or their agent, or a letter of permit denial designating the rationale for denial based on Sections 4 a, b, and c above, taken in their entirety (see Attachment 2).
 - 7) Purchaser or their agent must notify the appropriate Fisheries Management Unit of the actual date of stocking at least two (2) calendar days prior to occurrence of the stocking event. This notification can be done via letter, telephone, or e-mail. Upon receipt of notification, the Fisheries Management Unit shall provide a response to the purchaser or their agent that notification of the actual stocking date has been received.
 - 8) The permit must be available on site when fish are stocked into public waters.
 - a) If a private aquaculture operation is to do the stocking, they must have the original or a copy of the valid Public Waters Stocking Permit on site during stocking.
 - b) If the purchaser or their agent is to do the stocking, they must have the original valid Public Waters Stocking Permit on site during stocking.

- 9) Within 14 days calendar days of the actual public waters stocking event, a signed Public Waters Stocking Report (see Attachment 2) shall be sent to the Fisheries Management Unit that issued the permit.
- 10) Upon receipt of the report, the Fisheries Management Unit shall:
 - a) Record receiving the report.
 - b) Enter the data into the DNR's Fish Stocking Information System database.
 - c) Provide a response to the party that the report was received and processed.

Table 2. Emergency fish diseases, reportable fish diseases (Michigan Department of Agriculture Reportable Animal Diseases August 2002 – July 2003) and fish diseases of concern in the State of Michigan.

Reportable Fish Diseases

Disease Agent	Disease Name	Approved Fish Species Affected
<i>Aeromonas salmonicida</i>	Furunculosis	Atlantic Salmon, brook trout, brown trout, rainbow trout
<i>Ceratomyxosis shastal</i>	Ceratomyxosis	Atlantic Salmon, brook trout, brown trout, lake trout, rainbow trout
EED Virus	Epizootic Epitheliotropic Disease	Lake trout
EHN Virus	Epizootic Hematopoietic Necrosis	Atlantic Salmon, brook trout, brown trout, lake trout, rainbow trout
IHN Virus*	Infectious Hematopoietic Necrosis	Atlantic Salmon, brook trout, brown trout, lake trout, rainbow trout
IPN Virus*	Infectious Pancreatic Necrosis Virus	Atlantic Salmon, brook trout, brown trout, lake trout, rainbow trout
<i>Myxobolus cerebralis</i> *	Whirling Disease	Atlantic Salmon, brook trout, brown trout, lake trout, rainbow trout
Myxosporean agent PKD	Proliferative Kidney Disease	Atlantic Salmon, brook trout, brown trout, lake trout, rainbow trout
<i>Onchorhynchus masou</i> Virus	Onchorhynchus masou Virus Disease	Atlantic Salmon, brook trout, brown trout, lake trout, rainbow trout
<i>Renibacterium salmoninarum</i>	Bacteria Kidney Disease	Atlantic Salmon, brook trout, brown trout, lake trout, rainbow trout
Rhabdovirus – Spring Viremia of Carp Agent	Spring Viremia of Carp	
VHS Virus*	Viral Hemorrhagic Septicaemia	Atlantic Salmon, brook trout, brown trout, lake trout, rainbow trout
<i>Yersinia ruckeri</i>	Enteric Redmouth	Atlantic Salmon, brook trout, brown trout, lake trout, rainbow trout

* - These shaded diseases are considered emergency fish diseases. Fish must have certified free of these diseases to be permitted for stocking in public waters.

Fish Diseases of Concern – These are emerging diseases on the watch list for future action.

Disease Agent	Disease Name	Fish Species Affected
Ranavirus	Largemouth Bass Virus	Largemouth bass
Heterosporis	Heterosporis	Yellow perch
Iridovirus	Sturgeon Virus	Lake sturgeon

Michigan Department of Natural Resources - Fisheries Division

APPLICATION TO STOCK FISH INTO MICHIGAN PUBLIC WATERS

*Under authority of Section 48735 of Part 487, Sport Fishing, of Act 451, P.A. 1994, as amended, **stocking fish into the public waters of the State of Michigan is prohibited without an approved permit.** Failure to comply with the conditions of this Act and permit shall be cause for revocation of this permit. The penalty for stocking fish into public waters of the state without a permit is a misdemeanor, punishable by imprisonment for not more than 90 days, or a fine of not more than \$500.00, or both.*
